Q.No	Answer	Answer
101	F	• Longitudinal research - research that follows a group of people over a period of time
102	F	• Correlational research - research that examines the relationship between two or more variables
103	F	• Experimental research - research that involves manipulating one or more variables to see the effect on another variable
104	T	• Case study - research that involves a detailed examination of a single individual or group
105	T	• Survey research - research that involves asking a large number of people questions about a particular topic
106	T	• Focus groups - research that involves a small group of people discussing a particular topic
107	T	• Interviews - research that involves asking a person questions about a particular topic
108	T	• Observation - research that involves watching and recording the behavior of a person or group
109	T	• Content analysis - research that involves analyzing the content of a large number of texts or media
110	T	• Discourse analysis - research that involves analyzing the way in which language is used in a particular context

Very dissatisfied

Source: American Association of Colleges of Business (AACSB) data. The graph shows the percentage of students who are 'Very satisfied' or 'Satisfied' with their program from 1990 to 2008. The percentage generally increased over the period, starting at approximately 65% in 1990 and reaching about 85% by 2008.

Project 1: Designing a New Product

Project Overview

The project aims to design a new product that meets the needs of the market. The product will be a small, portable, and easy-to-use device that can be used in a variety of settings. The design process will involve research, prototyping, and testing.

Project Goals

- 1. Research the market and identify the needs of the target audience.
- 2. Develop a prototype of the product.
- 3. Test the prototype and gather feedback from users.
- 4. Refine the design based on user feedback.
- 5. Produce a final design and create a business plan.
